

Notes:

1. Use the same buttons you are currently using for the menu items
2. “Authentic Audio” should be in the same color as you have “Sound System & Studio” and in italics.
3. The Navigation Bar above should always be on the screen (anchored if device allows since site is responsive)
4. Animate the “Headphone Logo” (I sent images in WhatsApp) and use it instead of the MM that is currently shown (see below).

5. Place these on the home screen:

6. The Login Button should change to Logout once the user is logged in. You can leave this if it's going to take long.
